wu yulin, a 74-year-old veteran of project 523, helped isolate the chemical structure of artemisinin in the late 1960s from an herb used as a traditional fever remedy.

You could announce a social experiment, using anything from mailing list software to there.com, and that would set a bounded environment.

The room is equipped with UV lights and a positive-pressure air-filtering system providing 99.97% particle elimination and a complete change of air every 10 minutes.

A patient may refuse emergency life-saving surgery if he or she has given the hospital an advance health care directive that states the patient does not want to receive such surgery.

Three or four years ago he slipped up the ramp of a trailer landing on his left shoulder, which was the main thought that I thought his soreness was arthritic.

Adrenosterone's main action is to lower cortisol levels.
